AI-Enabled Risk, Compliance & Regulatory Reporting Transformation Playbook

Using AI to catch what manual review misses, without losing the human accountability regulators expect

Overview

A framework for AI-enabled risk, compliance, and regulatory reporting transformation that uses AI to improve detection and efficiency in compliance processes, while maintaining the human accountability, explainability, and audit-readiness that regulatory contexts specifically require.

Can AI actually be used in regulatory-sensitive compliance

processes given explainability requirements? Yes, with deliberate design — using AI for detection and flagging while maintaining human review and decision authority for actual compliance determinations, and choosing AI approaches with sufficient explainability for the

specific regulatory context, rather than avoiding AI in compliance entirely or deploying it without adequate explainability design.

What's the biggest risk of AI deployment specifically in compliance

and regulatory reporting contexts? Regulators and auditors need to understand why a compliance determination was made — AI approaches that can't provide adequate explanation for their outputs create genuine regulatory risk, distinct from AI accuracy concerns alone.
