End

Thursday, February 13, 2025 - 19:00

Type

Virtual

Registration Required

Yes

Price

0 €

Location

Microsoft Teams

Why Should You Participate?

A Target Operating Model (TOM) provides a roadmap for business leaders, consultants, and executives by outlining the future state of an organization's operations.

A Target Operating Model (TOM) is a blueprint for how an organization wants to operate in the future. It is a way to visualize and design the optimal state of the organization, taking into account its vision, strategy, and goals.

TOMs can be used to improve a wide range of organizational performance metrics, including efficiency, productivity, customer satisfaction, and profitability. They can also be used to help organizations adapt to change and to prepare for the future.

This webinar will provide an overview of Target Operating Models and discuss how to implement them in your organization. We will cover the following topics:

- What is a Target Operating Model?
- Benefits of using a Target Operating Model

- Components of a Target Operating Model
- Case studies of successful TOM implementations
- Steps to develop and implement a Target Operating Model
