Overview

A framework for operating strategically across multiple regulatory jurisdictions — deciding where to standardize globally, where to adapt locally, and how to manage genuine conflicts between jurisdictions' requirements.

How is this different from the Strategy for Regulated Industries

Playbook? That playbook addresses industry-specific regulation (energy, financial services, healthcare) within a given jurisdiction. This one addresses the cross-jurisdictional complexity of operating under multiple, often differing or conflicting, regulatory regimes simultaneously.

When do jurisdictional requirements genuinely conflict, versus just

differ? They differ when compliance with one doesn't prevent compliance with another (different reporting formats, for instance). They genuinely conflict when satisfying one jurisdiction's requirement makes compliance with another's impossible (opposing data localization or disclosure requirements, for example) — this playbook treats these as different problems requiring different responses.
