AI for Claims Processing & Insurance Operations Playbook

Speeding up claims with AI without losing the judgment that catches genuine edge cases

Overview

A framework for AI deployment in claims processing and insurance operations — automated triage, fraud flagging, and straight-through processing for routine claims — that preserves human judgment for complex or ambiguous claims while capturing genuine efficiency gains for routine cases.

Should AI aim to fully automate claims processing end-to-end?

Full automation makes sense for genuinely routine, low-complexity claims, but complex or ambiguous claims typically still require human judgment — the strongest deployment approach segments claims by complexity, automating routine cases while preserving human review for cases where judgment genuinely matters.

What's the biggest risk of over-automating claims processing?

Missing genuine edge cases or ambiguous situations that require human judgment, either producing customer-hostile automated denials that should have received human review, or missing fraud patterns that require investigative judgment beyond automated flagging.
