AI Risk, Regulation & Policy Compliance Playbook (Global Landscape)

Building compliance that works across a genuinely fragmented global AI regulatory landscape

Overview

A framework for navigating AI risk, regulation, and policy compliance across a fragmented global landscape — building a flexible compliance architecture that can adapt to varying jurisdictional requirements rather than designing for a single regulatory regime and retrofitting for others.

Is it possible to design a single AI compliance approach that

satisfies all major global regulatory regimes simultaneously? Not fully — different jurisdictions have genuinely different and sometimes conflicting requirements, but a flexible compliance architecture built around common principles (risk assessment, documentation,

human oversight) can adapt to jurisdiction-specific requirements more efficiently than designing narrowly for one regime and retrofitting for others.

How should organizations prioritize AI compliance investment given

the pace of regulatory change? Building foundational compliance infrastructure (risk assessment, documentation, audit trails) that supports adaptability to evolving requirements, rather than optimizing narrowly for current specific regulatory text that's likely to change.
