

# How to Actually Use Feedback Well

## Idea In Short

Every professional should genuinely value authentic, well-meaning feedback, since it is one of the few reliable ways to gauge real performance, impact and influence. Companies spend enormous sums researching what their customers think, yet professionals working closely with clients and colleagues often receive comparable insight for free, simply by asking the right questions at the right moments. Getting real value from feedback requires trust, self-awareness and the discipline to separate useful signal from noise delivered poorly.

## Why Feedback Deserves Genuine Thanks

Every professional should be genuinely thankful for authentic, well-meaning feedback, since it offers one of the few reliable ways to gauge real performance, impact and influence over time. Whether the feedback is flattering or difficult to hear, it holds real value when it comes from someone whose judgment is genuinely respected. Companies spend enormous sums researching what their customers actually think, yet many professionals receive comparable insight for free, simply by asking direct questions of clients, partners and colleagues: how a piece of work landed, whether a particular approach makes sense, whether something needs another set of eyes before going out, or how a colleague is genuinely performing.

## Yes, It Can Genuinely Hurt

Ambitious professionals tend to be accustomed to strong performance, and hearing that a piece of work was merely average, rather than exceptional, can be genuinely difficult to absorb. Too often, feedback arrives at the wrong moment or in the wrong tone, delivered out of frustration rather than a genuine spirit of improvement, and that kind of delivery rarely helps anyone grow.<sup>1</sup> High-performing organizations tend to expect a great deal from their people, and working long, demanding hours is common precisely because no one wants to disappoint clients or peers. Managers owe their teams real clarity about expectations, since a mismatch between what a junior colleague believes is expected of them and what a manager actually expects creates unnecessary friction that honest, timely feedback can

prevent.

## **Give Yourself Feedback First**

Most people can identify, without anyone else telling them, roughly three things they do well and consistently should keep doing, and roughly three things that genuinely need to change. Building the habit of honest self-assessment, on a regular basis rather than only during a formal review cycle, tends to make external feedback land as confirmation rather than surprise. Simple daily habits, like preferring a direct conversation over an ambiguous email for anything logistically important, listening patiently rather than interrupting, and proactively acknowledging strong work by a colleague to that colleague's own manager, compound into a noticeably stronger professional reputation over time.

## **Feedback Requires Genuine Trust**

Feedback works best when it flows constantly, some of it minor praise for a job well done, some of it a serious flag that a piece of work is far from complete. Without a genuine climate of trust, where people feel safe speaking honestly about both good and bad news, feedback degrades into hollow, scripted language exchanged mainly to satisfy a formal review process rather than to help anyone improve. A well-known observation attributed to Theodore Roosevelt captures this well: people generally do not care how much someone knows until they know how much that person genuinely cares.

## **Do Not Take Poorly Delivered Feedback Personally**

When feedback arrives from someone acting in bad faith, delivered with genuine hostility rather than any real intent to help, filing it away mentally rather than acting on it immediately is a healthy response. The weight any specific piece of feedback deserves should depend heavily on how much genuine respect the recipient holds for the person delivering it, not on how forcefully or confidently it was stated.

## **Some Feedback Takes Repeating**

Some people genuinely struggle to absorb feedback no matter how many different ways it gets communicated to them. When a professional consistently reports feeling like they never receive enough feedback, two explanations are usually worth considering: either their

manager is genuinely too hesitant to deliver honest, direct feedback, or the person receiving it is not actually listening closely enough to register it.<sup>2</sup> A useful reality check applies here: receiving the same piece of feedback repeatedly, from multiple different sources, is a genuine trend worth taking seriously rather than dismissing as one person's isolated opinion.

## **Building a Genuine Feedback Habit**

Treating feedback as a routine, ongoing practice rather than an occasional formal event tends to produce far stronger long-term results. Professionals who ask for it directly, offer it generously to others within a real climate of trust, and stay honest with themselves about their own performance build a genuine advantage over colleagues who only encounter feedback once a year, during a scheduled review that arrives too late to change much.<sup>3</sup>

- 1Constructive Feedback
- 2Active Listening
- 3Performance Appraisal

## **Summary**

Feedback remains one of the most valuable, and most uncomfortable, tools available to any professional. Getting genuine value from it requires asking for it directly, giving it honestly within a climate of real trust, being willing to give yourself an honest daily assessment, and learning to separate useful signal from feedback delivered poorly by someone who does not have your interests at heart.
